

Regency 20' with Bridge

1. Unpack display and locate parts.
2. Set up 8-panel section of display in the middle of the 10' backwall of booth. Stand up the base section (the panels with the foot channel on the bottom) and insert the stacking guides in to the tops of the panels.
3. Stack top 4-panel section onto base panels. Leave the panels in a slight zig-zag setup until the curved end panels are attached.
4. Attach the flexible marble end panels to the rigid panels to form half round end caps.
5. Slide "U" channels of base left end cap onto the left side of the display, (this will be repeated with the right side). Stack upper column on base column by aligning pins and stacking guide in panel.
6. With Curved end attached, carefully open display to straighten out the backwall.
7. Unfold the upper and lower center panels and place them together (as with the previous panels) in the center of the unit. Note: the 90° U channel is used to fasten them to the side panels.
8. repeat steps 2 through 6 for other side of display
9. Attach header and lightbars to complete main unit set-up.
